THE NEW GRAMOPHONE

SIR EDWARD ELGAR, O.M.

says

‘THE MOST IMPORTANT INVENTION IN THE HISTORY OF THE GRAMOPHONE’
FOR over 25 years "His Master's Voice" has been the accepted standard of gramophone excellence. Indeed, the standard obtained had become so high that further advance seemed impossible until certain problems had been overcome.

THESE PROBLEMS HAVE NOW BEEN SOLVED, AND THE NEW "HIS MASTER'S VOICE" INSTRUMENT EMBODIES ENTIRELY NEW DISCOVERIES RELATING TO SOUND AMPLIFICATION.

Hitherto the reproduction of treble notes (high frequency vibrations) has been almost too prominent, while the bass register (low frequency vibrations) has been correspondingly weak, the result being lack of balance.

To adjust this balance and give a reproduction in which both bass and treble have their true relation, as in the actual performances, is the problem that has been dealt with so successfully by our Research Department.
Externally, and in manipulation, the New Gramophone is similar to the standard "His Master's Voice" Instrument.

The secret of the amazing realism of its reproduction is the design of the special tone chamber, taper arm and a new type of sound box. The New Gramophone not only gives equal prominence to all sections of the scale from the low bass to the high treble, but it also reproduces details of orchestration that were formerly unheard. The tone is richer, rounder, and more true to the original than has ever before been heard from a Gramophone. Surface noise is practically eliminated.

In quality and workmanship the New Gramophone upholds the high tradition of all products bearing "His Master's Voice" Trade Mark. It is "all-British," the entire work in connection with it being carried out at The Gramophone Company's factories at Hayes, Middlesex.

You should take the earliest opportunity of hearing the New Gramophone, when you will agree that this great invention has to-day achieved the ideal of what a gramophone should be.

Listen for the Bass!
SIR EDWARD ELGAR, O.M., says: “The most important invention in the history of the Gramophone.”

New Type Internal Horn, New Type Amplifying Tone Arm with Ball-bearing Socket, ‘His Master’s Voice’ No. 4 Sound Box, which is also entirely new in design. Cabinet of light construction, covered with black leather waterproof cloth, fitted with leather carrying handle and metal corners. Equipped with single spring motor, 10 in. turntable, playing records up to 7-0 in. in diameter, graduated speed regulator. Self-closing needle container for two kinds of needles.

Provision is made for carrying 6 records in lid.

The Home of the Gramophone
WHERE THE NEW GRAMOPHONE IS MADE

THE GRAMOPHONE COMPANY, Ltd., is a British Company incorporated in 1900. Its factories at Hayes, Middlesex, are the largest talking-machine factories in Europe. They are the only British factories equipped for the complete production of Gramophones and Records. The Gramophone Company does not have its cabinets, spring motors or other essential parts made outside—it makes its own.

"His Master's Voice" PORTABLE MODEL

Cabinet of light construction, covered with black leather waterproof cloth, fitted with leather carrying handle and metal corners. Length 16½ in., width 5½ in., height 11½ in., when closed for carrying. Equipped with 1 in. single spring motor, 10 in. turntable, playing records up to 12 in. in diameter. Speed indicator plate and regulator, self-closing needle container for two kinds of needles. "His Master's Voice" ball-bearing tapering tone-arm fitted with raising and lowering device, and 'gooseneck.' "His Master's Voice" 'Exhibition' Sound-Box.

Provision is made for carrying 6 records in lid.

PRICE - £6:10:0

The above illustration shows the position of the tone-arm, sound-box, and winding key when the instrument is closed for carrying.
A CARRYING CASE THAT IS UNIQUE

"His Master's Voice" Metal Carrying Case has been designed to meet the demand for one that is neither heavy nor cumbersome, yet at the same time is durable, rainproof and reasonable in price.

This black metal case is exceedingly neat in appearance, and will accommodate 20 10in. or 12in. records. An important and exclusive feature is the metal partition (see illustration above) on each side of which 10 indexed record envelopes are placed, facing the dividing plate. Records can thus be found instantly, without "shuffling" through the lot. The dividing plate distributes the weight and prevents records jamming at hinge when case is open. A comfortable leather handle and a strong spring clip fastener are fitted.

</table>
WHY THE NEW
"His Master's Voice"
Instrument
is absolutely supreme

FOR over 25 years "His Master's Voice" has been the
accepted standard of gramophone excellence. Indeed, the
standard obtained had become so high that further advance
seemed impossible until certain problems had been overcome.

THESE PROBLEMS HAVE NOW BEEN SOLVED, AND
THE NEW "HIS MASTER'S VOICE" INSTRUMENT
EMBODIES ENTIRELY NEW DISCOVERIES RELATING
TO SOUND AMPLIFICATION.

Hitherto the reproduction of treble notes (high frequency vibrations)
has been almost too prominent, while the bass register (low
frequency vibrations) has been correspondingly weak, the result
being lack of balance. To adjust this balance and give a reproduction in which both bass and treble have their true relation, as in the actual performances, is the problem that has been dealt with so successfully by our Research Department.

Externally, and in manipulation, the New Gramophone is similar to the standard “His Master’s Voice” Instrument. The secret of the amazing realism of its reproduction is the design of the special tone chamber, taper arm and a new type of sound box. The New Gramophone not only gives equal prominence to all sections of the scale from the low bass to the high treble, but it also reproduces details of orchestration that were formerly unheard. The tone is richer, rounder, and more true to the original than has ever before been heard from a Gramophone. Surface noise is practically eliminated.

In quality and workmanship the New Gramophone upholds the high tradition of all products bearing “His Master’s Voice” Trade Mark. It is “all-British,” the entire work in connection with it being carried out at The Gramophone Company’s factories at Hayes, Middlesex.

You should take the earliest opportunity of hearing the New Gramophone, when you will agree that this great invention has to-day achieved the ideal of what a gramophone should be.

Listen for the Bass!

THE GRAMOPHONE COMPANY, LTD., LONDON, W.1
